Quick Guide

Height adjustment

The remote control's ↑ and ↓ buttons, raises and lowers the surface of the Shower/changing bed.

Removing slats

To remove the slats, simply grab a slat and pull it out of the changing bed.

Inserting slats

To insert the slats, simply press it back into place.
*Note that the slats have two different sides, a concave and a convex. Which one faces up, is all up to personal preference.*

Disengaging the guard rail

Pulling these two levers upwards unlocks the guard rail, allowing it to be dropped down and pushed down beneath the Shower/Changing bed.

It's locked into place by friction, meaning you don't have to push till you hear it click.

Engaging the guard rail

To engage the guard rail, simply grab it by the white rail and pull it towards yourself and upwards until it snaps into place.

Storing it away

To flip the Shower/changing bed up along the wall, grab it by the edge adjacent to the wall, and pull it up until it snaps into its vertical position.

Remember to disengage the guard rail before doing this!
