## Toilet Support Arms

### Description

Toilet support arms are a great aid if you need to get on and off the toilet safely. Their ergonomic shapes and rubber surface provide a comfortable grip, and the cleaning-friendly surfaces optimize hygiene. Because the different models are designed with several heights and an anti-slip surface, you have a firm grip from both standing and seated position. The support arms can be adjusted in height (20 cm) with a height adjustment unit to suit the individual user's needs. If you need extra room in the bathroom, the support arms can be folded up to vertical position.
