

Contoured Leg Relaxer

Elevates your legs and aids circulation, reducing load on the heart

Removable foam insert allows you to change the angle to suit your optimum comfort needs

Wedge angle is 15°,
10° with insert removed

A specially contoured and adjustable leg support pillow designed to provide comfort and relief to tired, aching legs and to alleviate lower back strain.

Designed for use on the bed, this contoured leg elevation pillow wedge helps to alleviate back and leg pain by raising your legs for improved circulation and vascular drainage. Also useful in reducing the risk of pressure injury by raising heels off the mattress surface.

Contoured for the calves and scalloped for the thighs, this pillow is designed to fit the natural curves of your body for optimum comfort, while helping maintain the "pelvic tilt" position that eases stress on the spine. It provides even weight distribution which helps alleviate lower back strain, tension and pressure on the sciatic nerves.

The 450 mm high, removable foam insert allows you to change the height under the heels from 180 mm to 135 mm, for a truly customised fit.

Made from 100% open cell 'breathing' urethane foam and available with either a removable quilted cover for maximum comfort, or a hospital grade, moisture resistant, bacteria inhibiting Steri-Plus™ cover for maximum infection control and incontinence protection. Covers are machine washable and replacement covers are also available.

Ideal for those with varicose veins, phlebitis, swollen legs, feet and ankles, or for general use during pregnancy and convalescence. Can be used in conjunction with the Contoured BedWedge.
